DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of the Group I invention, which consists of claims 1 to 14 in the reply filed on January 19, 2007 is acknowledged.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

3. Claim 8 is objected to because of the following informalities:
 - I. In claim 8, line 3, it appears that "filed" should be –field—as in claim 1, the last line.Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 1742

5. Claim 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

I. In claim 3, the penultimate line, the phrase, "the plurality of Solutions L3" lacks a clear antecedent.

Claim Rejections - 35 USC § 103

6. Claims 1 to 14 are rejected under 35 U.S.C. 103(a) as being obvious over each of Waki et al. (Waki '978, US Patent No. 7,066,978), Hattori et al. (Hattori '895, US Patent No. 6,994,895) or Hattori et al. (Hattori '357, US Patent Application Publication No. 2004/0033357) each taken in view of Thumm et al. (Thumm '332, US Patent No. 6,221,332).

The applied reference has a common Assignee and common inventors with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the

Art Unit: 1742

application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(I)(1) and § 706.02(I)(2).

Each of Waki '978, Hattori '895 and Hattori '357 teaches a process which, with the exception of the use of high pressure reactant streams, is the same as the instantly claimed process (for example, Waki '978, column 13, Example 1-1; Hattori '895, columns 16 and 17, Examples 1-4; and Hattori '357, page 10, Example 1).

Thumm '332 teaches that pressurized reactant streams having pressures of 8,000 to 50,000 (55 to 345 Mpa) improves the mixing of the reactants, results in a more efficient reaction (column 1, lines 55 to 68) and provides a more uniform smaller particles size product (column 16, lines 37 to 45).

The instant claims and Waki '978, Hattori '895 and Hattori '357 differ in that the Waki and Hattori references do not teach the use of a high pressure reactant stream.

However, one of ordinary skill in the art at the time the invention was made would have been motivated to use high pressure reactant streams in the Waki's and Hattori's processes so as to improve the mixing of the reactants, the efficiency of the reaction and to provide a more uniform smaller particles size product as taught by Thumm '332.
